

SPOTLIGHT - AEROSPACE PLENUM CABLE

Definition: The plenum (pronounced /plɛnəm/) is the space that can facilitate air circulation for heating and air conditioning systems, by providing pathways for either heated/conditioned or return airflows. The plenum space is typically used to house the data & communication cables.

At Aerospace Wire & Cable, manufacturing hi-temp plenum rated cable is our bread and butter. Our industry approvals include all plenum UL ratings (**CL2P**, **CMP**, **CL3P**, and **FPLP (Canadian UL CMP)**). Temperatures range from **60C** to **200C**. Most importantly our manufacturing capabilities allow you to customize your order to match exact specifications whether it pertains to size, temp and voltage.

AEROSPACE NEEDS YOU!

WIN A TAYLOR MADE BURNER DRIVER OR APPLE IPOD TOUCH

At Aerospace Wire & Cable, our #1 priority is customer satisfaction. For the past 24 years, our mission has been to deliver quality products, on time and at a great value.

This month, we will be conducting our first annual customer satisfaction survey, helping us make your experience with us even better. Your feedback is so important to us, that each submission will enter you into a drawing to win your choice of either a **Taylor Made Burner driver** or an **Apple IPOD touch**. The survey should only take about 3 minutes to complete and all information is confidential. You will receive notification via email if you are the winner of the drawing on September 15th, 2010. We really appreciate your help and good luck! Survey conducted by Zoomerang.
