

SPOTLIGHT - (UL) TRAY CABLE / VFD APPLICATION

Industrial cable with Teflon FEP is one of our many fortes. Meant for high voltage applications and harsh environments, Aerospace Wire & Cable can customize these cables to match your customer's exact specifications.

This month we are going to point the spotlight on our line of 600 V 200C (UL) Tray Cable (Type TC). We can manufacture AWG sizes that range from 2 to 18 and can be made either shielded (aluminum / mylar) or unshielded. Most recently, we have developed a Tray Rated Cable with Symmetrical Grounds for VFD (Variable Frequency Drive) applications.

RELAX, YOU'RE IN GOOD HANDS

Everytime an order is placed with us, you can relax knowing that every item is manufactured out of our plant located in College Point, NY. Most importantly, before each order is shipped, our engineers inspect each product to ensure that it passes our quality control check list. It's no surprise that in 2009, we were able to achieve a 99% customer satisfaction percentage.

CASE STUDY - SERVICE

At Aerospace Wire & Cable we pride ourselves on delivering great service. Regardless of the situation, we problem solve and offer the best solutions. Never over-promising, always over delivering.
